

DopamineLock AI

Short-form video apps stay locked until you earn access: answer a quick quiz, get a guardian's approval, or spend points on an Emergency Pass.

Built with ThinkRoot AI.

Features

- Dashboard: doomscroll time, lock mode, Dopamine Points, Trust Score, live app telemetry
- AI micro-quiz: 3 questions, +150 PTS for each correct answer
- Guardian Hub: grant 30-minute access or reject proof
- View Interceptor: a lecture is approved, YouTube Shorts is locked
- Point Store: Emergency Pass costs 200 PTS, and each redemption raises the next price by 50%
- Wrapped: summary of your activity

Tech stack

Python (Flask), SQLite, React, Tailwind CSS

Run it

```
pip install -r requirements.txt
python app.py
```

Open <http://localhost:5000>. If that port is busy, run:

```
python -c "import app;
app.app.run(port=8000)"
```

and open <http://127.0.0.1:8000>. Progress is saved in `dopamine.lock.db`; use "Reset demo data" in the header to start over.

Project structure

<code>app.py</code>	Flask server and REST API
<code>static/index.html</code>	React frontend
<code>requirements.txt</code>	Python dependencies

Limitations

App telemetry, guardian requests and quiz questions are sample data. The app does not track real device usage yet.

Roadmap

Real app usage tracking, AI-generated quiz questions,
and a mobile client.
